# DECORA 2

Decora 2 takes the concept of flexibility to the extreme by allowing the enrichment of the ceramic surface through the use of functional inks.

A new way of digital glazing.

Same layout, same raw materials, but different effects:

- sharp 3D textures on the base
- 3D reliefs on top coat
- matt to gloss transitions on the top coat
- glue and grit applications
- anti-slip and antibacterial properties

New features, same quality:

- compact 2-bar frame 910 mm
- precise ground fixing for reliable repositioning of the printer
- possibility of synchronisation with other printers
- operation on existing conveyor belts and without cabin
- discharge up to 70 g/m<sup>2</sup> per bar
- built-in ups for movement without shutdown
